

Boston Atomics

We are focused on constructability

- Horizontal integrated high temperature gas reactor
- Funded through ARDP, ARC-20 program
- Consortium involved in design:

Reactor details:

- 80-200 MWt (32-80 MWe)
- 750°C core outlet temperature
- Deployment in the 2030s

What makes us unique:

- 1/5th traditional SMR building height
- Short building: adaptable siting and more modularizable
